Summary

Full-stack developer building practical web applications with React, Next.js, Node.js, and TypeScript. I focus on turning ideas into real, usable products that solve everyday problems, especially in fintech and developer tools. Most of my experience comes from hands-on project work where I design, build, and improve systems from scratch, with a strong focus on clean code, performance, and real-world usability.

Education

Admas University Degree • First Year
Computer Science Ethiopia , Addis abeba • Expected Graduation: 2030
Studying Computer Science, focusing on building a strong foundation in software development, algorithms, and system design. I’m actively learning and applying programming concepts through real-world projects using technologies like React, Node.js, and TypeScript. Alongside my studies, I continuously work on personal and collaborative projects to strengthen my problem-solving skills and gain practical experience in full-stack development.

Experience

Geez Security Ethiopia , Addis abeba
Fullstack Development May-2025 , January-2026
Worked as a full-stack developer at Geez Security, contributing to the development of web-based security systems as well as a student course lab platform used for practical learning and assessments. I helped build and maintain features across both frontend and backend, improved performance, and fixed bugs to ensure stability. I also worked on the student lab system where learners could practice and complete structured tasks in a controlled environment. My role included turning requirements into working features and collaborating with the team to deliver reliable, real-world applications.

Projects

Yegna Pay Jun-2025 - April 2026
Built **Yegna Pay**, a developer-focused payment verification system designed to simplify and automate how businesses in Ethiopia confirm transactions. The platform provides an API-based workflow that verifies payments through multiple checks like transaction ID validation, amount matching, and duplicate detection. I designed and developed the system to reduce manual receipt verification, improve trust between merchants and customers, and make payment handling faster and more reliable for developers and small businesses integrating digital payments.
